Title: An act to to establish a task force that develops fusion energy.

BE IT HEREBY ENACTED BY THE GENERAL ASSEMBLY OF THE UNITED NATIONS

Justification Clause: We, as a part of the United Nations, have found an alternative resource to power the needs of the world. We will use the resource of fusion energy to cut out the use of fossil fuels. Fusion energy is the process of two nuclei being fused together naturally. When this occurs, the energy is captured through this reaction. Fusion energy will benefit us, because it is much safer and cleaner for our environment. This type of energy comes from a star, and will be a lot cheaper than any other alternative. It also provides more energy than any other technology that we currently use. Although it is nonrenewable, it still has the same benefits of other nonrenewable resources.

Section I: To put this proposal into action, we will be organizing a task force known as the Fusion Energy Action Team (FEAT). This task force will be overseeing research and development of fusion energy.

Section II: The FEAT will consist of highly qualified engineers and scientists from all over the world.

Section III: The FEAT headquarters will be located in Seoul, South Korea. This headquarter will be developed for research. The laboratory will be located in a classified location. Once this development is proven to work, we will establish other laboratories around the world.

Section IV: This project will be funded through the U.N. General Assembly. This fund is based on a country's ability to pay so that it is fair to that country. This will not be an additional fee to nations associated with the U.N.

Section V: This proposal will go into effect a year after ratification.
